NEW

Brainshark

Link to External Content

Authors will now have the option to “Link to Web Content” when creating a presentation in Brainshark. The author would provide a URL that points to the document they want to upload. This “Web Content” slide functions as a URL slide that is set to launch without player so that users can launch the URL directly from the portal instead of opening the presentation.

FIXED

The following issues were addressed in this release:

- Bulk Upload Content Utility timing out
- Pause/Play Toggle behavior on iPad
- Mobile slide timings inconsistency
- Background Image and Question text not appearing for Guest Audio requests
- 16x9 Photos not appearing correctly in the player
- Guest authors cannot review previously recorded audio
- Reporting dashboard does not reflect the correct views when drilling down to hourly details
- Groups by user report brings back duplicate data
