NEW

Brainshark for Coaching

WebM Video file format

Brainshark now supports the upload of WebM, a popular video file format that is generated by Join.Me and other recording tools.

Brainshark for Training

Learning & Admin Report Updates

Existing report updates include fields in the User Report to identify Active Authors and fields in the Course Creation Report to show Course URLs and PresentationIDs. These fields appear in the csv format reports only.

Course Ratings & Comments

In this release, we are introducing Course Ratings & Comments. With Course Ratings & Comments, Learners can rate and add comments to any course they have completed. Learning admins and cadmins control the feature, and they can allow authors to enable or disable it for each course. (This new feature will also show in the Brainshark Enterprise interface-- user must click on course title and open the course page to see ratings/comments.)

Brainshark Enterprise

Generate Audio Upgrade (Text to Speech)

With the upgrade to Brainshark's audio generator, the Text to Speech feature now offers more life-like voices as well as an expanded list of voice types that Authors may choose from.

HTML5 Player Update

With this release of the HTML5 player, Viewers will be able to print slides, print course completion certificates, launch the guestbook after content is viewed, launch an attachment when the content closes and be branched to another presentation, a web link, completion results or a certificate upon completion of a course.

FIXED

The following issues were fixed this release.

- Coaching Feedback page includes modal that warns reviewers they are about to lose their information if they attempt to click an action on the feedback page other than the "Submit" button
- Upload process supports video file uploads that are less than 5mb
- Browser language set to Swedish does not display text correctly
