

BRAINSHARK®

December 15, 2018

Product Release Notes

NEW

Brainshark Content

Flash less Audio Recording Improvements

Updates to the Flash less Audio Recording page will improve its overall usability. The individual components on the page (slide area, slide notes, recorder, and table of contents) will now dynamically resize depending on screen size and resolution – so authors will always have an easy-to-read view of their content. Slide notes have been improved to include the formatting of line breaks and wrapping. Personalized presentations will account for locked audio and slide notes – while still giving the user to ability to record over their personally uploaded slide content.

Brainshark Platform

Manage Groups Redesign

The Manage Groups page – in Administration > Manage Groups – has been redesigned. Multiple groups may be deleted in a single action and the table information may be exported to a .csv file.

Brainshark Training

Course Sessions

Multiple sessions of a course may be scheduled and managed to support live events such as instructor-led training and webinars. Authors and administrators have the option of enrolling students directly into a session or enrolling at the course level and allowing students to select a session that fits their schedule.

New content type:

A new content type – Course Sessions – is available. To use the course sessions feature, authors use the 'Create course from content type' option and select Course Sessions. Once the course is created use the 'Manage Sessions' button on the course detail to create sessions.

New templates:

Three new learning templates are available to support course sessions. All are customizable by the company or learning administrator in Administration > Manage Learning > Manage Templates.

1. Course with Sessions Registration: This email may be sent when a student is enrolled at the course level and a session is not selected. The email template includes information about following the included URL to Brainshark to select a session.
2. Course Session Registration: This email may be sent when a student is enrolled in a session, either by an author or administrator or by selecting a session on their own. It

BRAINSHARK®

includes session information such as date, start and end time, and location. A calendar attachment is also included.

3. Course with Sessions Reminder: This email may be sent to students based on their session date. The author / administrator may select how far in advance of the session date the email is sent.

Group enrollments:

Group enrollments are not available for course sessions. To support enrolling group members a new 'Filter by Group' option has been added to the Find User page. This allows the same result as enrolling 'All Current Members' in a group enrollment.

Limitations:

- Students may not be enrolled in course sessions from the Manage Users > Set Enrollments page.
- Students may not be manually marked complete for a course session on the Enrolled Students page or the Manage Users > Set Enrollments page. Completed status is granted when an individual session is marked complete by the author or administrator.

Brainshark Reporting

Enhanced Filters and Chips for Team Readiness Dashboard

Customers now have the ability to search and save groups to a filter, in addition to activities. Customers can apply their selection to filter team dashboard results and view their filters as chips on the page.

Team Readiness Dashboard Improvements

Customers without coaching enabled will not see coaching stats tracked in their team readiness dashboard.
